Abstract

Covid-19, well known as the Corona virus pandemic, has brought global activities to a standstill, halted the socio-economic development causing recession globally and proving that manmade development and its techsavy ways are inferior against nature. The closure of outdoor activities (Lockdown) for long periods would be marked in history for posterity. Impact of Covid-19 had brought sudden lifestyle changes which became imperative, however, on the other hand lockdown has turned out to be a boon for Earth, its environment and human health. Despite the change in our regular activities, Covid-19 has turned to be of great help to our ecological systems bringing positive changes. The aftermath of post-pandemic will be varied for different aspects of environment, emphasizing physical, social and spiritual aspects.

Keywords: Pandemic, Socio-economic, Lockdown, Ecological systems.
